PRODUCT DESCRIPTION

License Plate Protectors

NARRATIVE

NUMBER PLATE PROTECTOR

Allows your numberplate to be read from straight on but (depending on the film being used), not from the side, or not from over-head. The special film decreases the visibility of the number plate as the angle increases until nothing is visible.

Our Number Plate Protectors are designed to defeat K and Ka photo radar cameras when the camera attempts to photograph your license plate for a "ticket in the mail". It is very simple to install over your license plate, taking less than five minutes.

Installation is as simple as drilling some holes into the outer clear plastic for the existing numberplate screws. Be careful not to drill too close to the film as you can permanently damage it if water gets in. The number plate protector can be installed the wrong way. Make sure that when you are directly in front of the protector, you can still clearly see through it. If you can not then you have it around the wrong way, and the plate will work in reverse, blocking anything in front of it but nothing to the side or over-head.

SPECIFICATIONS

License Plate Protectors:	
CPF-04 (car side blocking)	370 x 130mm
CPF-06 (car side & over-head blocking)	379 x 130mm
CPF-02M (motorbike blocking)	185 x 950mm
CPF-K (hard plate protector)	380 x 140mm
